The image contains three diagrams illustrating correct forklift operation techniques for loading and unloading goods from a rack:

- Diagram 1 (Left):** Shows a forklift operator loading goods onto a rack. The operator is positioned at the front of the forklift, and the load is being placed on the rack. The caption below reads: "从外側將貨物置下自後推入" (Put the goods on cart from the front and push in).
- Diagram 2 (Middle):** Shows a forklift operator unloading goods from a rack. The operator is positioned at the front of the forklift, and the load is being removed from the rack. The caption below reads: "到預定的高度將貨物拉往後方，多車位車輛需輪流" (Goods stored taller will pull the former goods forward, only one-way traffic).
- Diagram 3 (Right):** Shows a forklift operator unloading goods from a rack. The operator is positioned at the front of the forklift, and the load is being removed from the rack. The caption below reads: "外側將貨物拉出，緊要時自後方下車" (When the front goods are taken away, inside cart will take down goods from the back).
